Sample Mettl Python Test Questions with Answers

Question 1: Basic Syntax and Data Types

Q: Write a Python program to swap two variables without using a temporary variable.

Answer:

```
a = 5  
b = 10
```

```
a, b = b, a
```

```
print("a:", a)    Output: a: 10  
print("b:", b)    Output: b: 5
```

Explanation:

This approach utilizes Python's tuple unpacking feature, allowing multiple assignments in a single line. It effectively swaps the values of 'a' and 'b' without needing an extra temporary variable.

Question 2: Control Structures

Q: Write a Python function to check whether a number is prime or not.

Answer:

```
def is_prime(n):  
    if n <= 1:  
        return False  
    for i in range(2, int(n**0.5) + 1):  
        if n % i == 0:
```

```
        return False
    return True
```

Example usage:

```
print(is_prime(13))    Output: True
print(is_prime(4))     Output: False
```

Explanation:

The function checks divisibility from 2 up to the square root of 'n', which optimizes performance over checking all numbers up to 'n'. If no divisor is found, 'n' is prime.

Question 3: Data Structures

Q: Given a list of integers, write a Python function to find the second largest element.

Answer:

```
def second_largest(nums):
    unique_nums = list(set(nums))
    if len(unique_nums) < 2:
        return None    Or raise an exception
    unique_nums.sort()
    return unique_nums[-2]
```

Example usage:

```
numbers = [4, 1, 7, 3, 7, 8]
print(second_largest(numbers))    Output: 7
```

Explanation:

The function first removes duplicates using 'set', then sorts the list. The second largest element is the second last item in the sorted list.

Question 4: String Manipulation

Q: Write a Python program to check if a string is a palindrome.

Answer:

```
def is_palindrome(s):
    s = s.lower()
    return s == s[::-1]
```

Example usage:

```
print(is_palindrome("Racecar"))    Output: True
print(is_palindrome("Hello"))     Output: False
```

Explanation:

The function converts the string to lowercase for case insensitivity and compares it with its reverse using slicing.

Question 5: Functions and Recursion

Q: Implement a recursive function to compute the factorial of a number.

Answer:

```
def factorial(n):  
    if n == 0 or n == 1:  
        return 1  
    else:  
        return n * factorial(n - 1)
```

Example usage:

```
print(factorial(5))    Output: 120
```

Explanation:

The function uses recursion to multiply 'n' by the factorial of 'n-1' until reaching the base case.

The test duration and question count vary depending on the role and level of the position.

Typical Mettl Python Test Questions: An In-Depth Look

1. Basic Python Syntax and Data Types

Sample Question: What is the output of the following code snippet? `x = [1, 2, 3] x.append([4, 5]) print(x)` Options: a) [1, 2, 3, [4, 5]] b) [1, 2, 3, 4, 5] c) Error d) [1, 2, 3, 4, 5, [4, 5]]

Correct Answer: a) [1, 2, 3, [4, 5]] Explanation: The `append()` method adds its argument as a single element to the list. Since `[4, 5]` is a list, it is appended as a nested list.
2. Data Structures: Lists, Tuples, Dictionaries, Sets

Sample Question: Which data structure provides the fastest lookup time for checking if an element exists? a) List b) Tuple c) Dictionary d) Set

Correct Answer: d) Set Explanation: Sets in Python are implemented as hash tables, providing average $O(1)$ time complexity for lookups, whereas lists and tuples require $O(n)$ time.
3. Control Flow and Functions

Sample Question: What will be the output of this function? `def func(a, b=2, c=3): return a + b + c print(func(1))` Options: a) 6 b) 5 c) Error d) 7

Correct Answer: a) 6 Explanation: Default arguments are used for `b` and `c`. Since only `a=1` is provided, `b=2`, `c=3`, summing to 6.
4. Object-Oriented Programming

Sample Question: What is the output of the following code? `class A: def __init__(self): self.value = 10 def method(self): return self.value obj = A() print(obj.method())` Options: a) 10 b) Error c) None d) AttributeError

Correct Answer: a) 10 Explanation: The class initializes `self.value` to 10, and `method()` returns this value.
5. Libraries and Modules

Sample Question: Which library would you use for numerical computations? a) NumPy b) Pandas c) Matplotlib d) Requests

Correct Answer: a) NumPy Explanation: NumPy is designed specifically for numerical operations, including matrix manipulations and mathematical functions.

Final Thoughts

Preparing for a Mettl Python test requires a balanced approach—deepening understanding of core concepts, practicing coding problems, and developing test-taking strategies. Remember, the goal isn't just to memorize answers but to build a solid foundation in Python programming. This foundation will not only help you excel in assessments but also serve as a critical asset in real-world development scenarios. By familiarizing yourself with common questions, understanding the

underlying concepts, and practicing regularly, you can improve your confidence and performance in Mettl assessments. Whether you're a fresh graduate or an experienced developer, continuous learning and practice are key to unlocking success in Python evaluations and advancing your tech career. Good luck with your preparation, and remember: mastery comes with consistent effort and practice.

Most people do not set out with the intention of downloading a book. Usually, it starts with a small need. A question that lingers longer than expected, a topic that keeps appearing in conversations, or a moment when surface-level information simply is not enough. That is often when *Mettl Python Test Questions And Answers* enters the picture.

At first, the goal might be modest. Read a chapter. Find one useful explanation. Move on. But having the book available in PDF format quietly changes that intention. There is no rush to finish, no pressure to read everything at once. The book sits there, ready, waiting for attention.

Reading begins to happen in fragments. A few pages in the morning while the day is still quiet. A bookmarked section checked again in the afternoon. A highlighted paragraph revisited at night because it suddenly makes more sense. These moments do not feel like formal study. They feel natural.

The layout remains familiar every time the file is opened. Pages look the same, headings stay where they were, and visual cues help the mind remember. Over time, readers stop searching and start navigating instinctively.

Notes appear almost without effort. A sentence stands out, so it gets highlighted. A thought forms, so it gets written in the margin. Weeks later, those notes feel like messages left behind by an earlier version of the reader.

Search tools quietly save time. Instead of flipping through pages or scrolling endlessly, one keyword brings clarity. It turns the book into something useful long after the first read.

There is also a sense of relief in knowing the source is trustworthy. When a book comes from a reliable platform, attention stays on understanding, not on questioning accuracy or safety.

For students, this kind of access feels stabilizing. Materials are always there, even when schedules are chaotic. Studying becomes less about urgency and more about familiarity.

Professionals experience it differently. Certain sections become references. Others gain meaning only after real-world experience catches up. The book grows alongside the reader.

Independent learners often appreciate the absence of structure. There is no deadline, no checklist. Progress happens when curiosity returns, not when it is demanded.

Accessibility options quietly matter. Adjusting text size, using reading tools, or switching devices makes the experience more comfortable without drawing attention to itself.

Files stay organized. Even after months, returning does not feel like starting over. The content feels known, not overwhelming.

What stands out over time is how the relationship changes. *Mettl Python Test Questions And Answers* stops feeling like a file that was downloaded. It becomes something familiar, something useful in quiet ways.

Sometimes, a passage read long ago suddenly feels relevant. A concept that once seemed abstract now makes sense. Growth shows itself in these small moments.

Reading no longer feels like an obligation. It becomes something to return to when clarity is needed or curiosity resurfaces.

In this way, learning slips into everyday life without announcement. The book does not demand attention. It simply remains available.

And often, that quiet availability is what makes it valuable. Knowledge does not have to be chased when it is already close at hand.

Checking user reviews or source descriptions can also reveal whether a copy is complete and properly formatted. This verification process reduces the risk of acquiring incomplete or low-quality files.

File integrity is another important consideration. Reliable sources provide files that open smoothly, display correctly, and include all expected sections. If a file fails to open, displays errors, or appears truncated, it may be corrupted. In such cases, obtaining a fresh copy from a different trusted source is recommended to ensure usability.

Evaluating digital repositories

When exploring online repositories, consider factors such as organizational reputation, transparency, and update frequency.
