Types of Oil Well Tests: An Overview

Different testing methods serve unique purposes at various stages of well life and under specific operational conditions. The main types include:

1. Drill Stem Tests (DST)

Purpose: To evaluate formation pressure, permeability, and fluid contacts during drilling.

Process: The drill string is temporarily removed, and a testing tool is lowered into the wellbore. Formation fluids are isolated and allowed to flow into the drill stem, during which pressure and flow rate data are recorded.

Applications:

1. Determining reservoir productivity.
2. Identifying fluid types and contacts.
3. Making decisions on well completion.

1. Production Tests

Purpose: To quantify the flow rate, pressure, and fluid composition during normal production operations.

Process: The well is stabilized at a certain flow condition, and data are collected over a period, often including shut-in periods to evaluate pressure buildup.

Applications:

1. Estimating ultimate recoverable reserves.
2. Monitoring well performance over time.
3. Evaluating the efficiency of artificial lift systems.

1. Pressure Transient Tests

Purpose: To analyze pressure behavior during well shut-

in or flow periods, revealing reservoir properties such as permeability and boundaries.

Types:

1. Pressure buildup tests: Shut-in the well and record pressure recovery.
2. Pressure drawdown tests: Flow the well at a constant rate and record pressure drop.

Applications:

1. Determining formation permeability.
2. Identifying reservoir boundaries.
3. Detecting communication between different zones.

1. Well Integrity Tests

Purpose: To verify the physical integrity of the wellbore and casing.

Process: Applying pressure or vacuum to check for leaks or failures.

Applications:

1. Ensuring safety before and after interventions.
2. Confirming well integrity during abandonment procedures.

Equipment and Tools in Well Testing

A variety of specialized equipment underpin successful well testing operations. These include:

1. **Test Trees and Valves:** To control flow and isolate formation zones.
