What Are Computer Networks?

A computer network is a collection of interconnected devices that communicate to share data and resources. Networks can be categorized based on their size, topology, and purpose:

- Local Area Network (LAN): Covers a small geographical area, such as an office or building.
- Wide Area Network (WAN): Spans large geographical areas, often connecting multiple LANs.
- Metropolitan Area Network (MAN): Connects LANs within a city or metropolitan region.
- Personal Area Network (PAN): Connects personal devices within a very limited range.

Understanding Computer Systems

Computer systems encompass hardware components, operating systems, and application software that work together to perform specific tasks. Key components include:

- Central Processing Unit (CPU): The brain of the computer that executes instructions.
- Memory (RAM): Temporary storage for data being processed.
