Introduction to Chemical and Physical Changes

Before exploring the details of the worksheet, it's important to understand the core concepts of chemical and physical changes.

What is a Physical Change?

A physical change involves a change in the form or appearance of a substance without altering its chemical composition. These changes are often reversible and include processes like melting, freezing, cutting, and dissolving. Characteristics of Physical Changes: - No new substance is formed. - The change is usually reversible. - It involves changes in state, size, or shape. - No energy is produced or absorbed in significant amounts. Common Examples: - Melting ice into water. - Boiling water to produce steam. - Breaking glass. - Dissolving sugar in water.

What is a Chemical Change?

A chemical change results in the formation of one or more new substances with different properties from the original materials. These changes are often irreversible and involve chemical reactions. Characteristics of Chemical Changes: - New substances are formed. - Usually irreversible or difficult to reverse. - Often accompanied by energy changes (heat, light, sound). - Changes involve breaking and forming chemical bonds. Common Examples: - Rusting of iron. - Burning wood. - Baking a cake. - Baking soda reacting with vinegar.
