Core Concepts Addressed in the Solubility PhET Lab

Before diving into the answer key, it's essential to understand the fundamental concepts that the lab emphasizes:

1. **Solubility:** The maximum amount of solute that can dissolve in a solvent at a given temperature.
2. **Saturation:** The point at which a solution contains the maximum amount of dissolved solute; additional solute will remain undissolved.
3. **Supersaturation:** A state where a solution contains more dissolved solute than normally possible at a given temperature, often unstable.
4. **Temperature's Effect:** How increasing or decreasing temperature impacts solubility for different substances.
5. **Pressure's Effect:** Particularly relevant for gases, where increased pressure often increases solubility.
6. **Solubility Curves:** Graphical representations showing the relationship between temperature and the amount of solute dissolved.

Sample Questions and Corresponding Answer Key Insights

Below are typical questions from the PhET solubility lab exercises, with guidance on how to interpret the answer key:

Q1. What happens to the solubility of salt as temperature increases?

Answer Key Insight:

Most salts exhibit increased solubility with rising temperature. The answer key will show that, for example, sodium chloride's solubility increases slightly with temperature, which aligns with the general trend observed in solubility curves.

Q2. How does the solubility of sugar change with temperature?

Answer Key Insight:

Sugar's solubility increases significantly with temperature, meaning warmer solutions can hold much more sugar. The answer key confirms this trend and may provide specific numerical values at different temperatures.

Q3. What is the difference between saturated and supersaturated solutions?

Answer Key Insight:

A saturated solution contains the maximum amount of solute at a given temperature, with no more dissolving. Supersaturated solutions hold more solute than typically possible, often created by dissolving solute at high temperature and then slowly cooling. The answer key explains how to identify these states based on visual cues and solute behavior.
